

Help Your Software Talk With the World.

Internationalization Solutions

Lingoport offers a wide range of internationalization services combined with the power of our Globalyzer software (see other side) to help your company achieve its global release goals on time and on budget. Our teams of architects, project leaders and engineers will help you meet your global release objectives while augmenting your engineering team's product development efforts.

Services include:

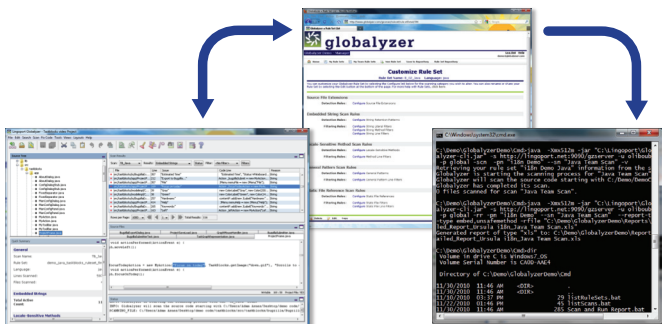

- Internationalization planning, requirements development and assessments
- Detailed code review, architectural direction, project planning
- Internationalization software development
- Globalization testing
- Internationalization training

Visit Lingoport.com and contact us today to learn how Lingoport can support your internationalization initiatives.

globalyzer

Globalyzer helps development teams internationalize source code, both initially and as an integral part of future releases. Find, fix and monitor issues quickly so your software is always ready for localization and worldwide customer requirements.

What is Globalyzer?

Globalyzer is a client/server application that scans source code and steps engineers through internationalization issues, supporting a wide variety of programming languages. It includes:

- **Globalyzer Server** — Manage your teams and internationalization efforts. With default and customizable “rule set” controls, Globalyzer Server is highly configurable to your product requirements.
- **Globalyzer Client** — Scan and work with source code on your desktop while communicating with the Globalyzer Server for your custom rule sets. The Globalyzer Client steps developers through internationalization issues, while also managing and reporting on status. Your code stays on your local machine, for secure scanning and handling.
- **Globalyzer Command Line** — Use it as part of any automated process like a nightly build to measure and report ongoing internationalization efforts.
